HOW TO READ YOUR SMART REPORT

Understanding your personalized health intelligence results

YOUR REPORT FLOW

WHAT EACH SECTION MEANS

PARAMETERS & RANGES

Each test value is displayed alongside its reference range. Visual range sliders show exactly where your result falls — making it easy to see if you are within normal, borderline, or abnormal zones.

HEALTH PROFILES

Related markers are grouped into profiles — such as Lipid, Liver, Kidney, and Thyroid — revealing patterns across your body systems rather than isolated numbers.

RISK SCORE

An overall health score from 0 to 100, calculated from your profile patterns and clinical guidelines. It gives you a quick, at-a-glance view of your health status.

DIET & LIFESTYLE

Personalized dietary guidance and daily habit recommendations tailored to your specific test results, helping you make targeted adjustments for better health outcomes.

COLOR LEGEND

Normal
Within the healthy reference range. No action needed.

Borderline
Slightly outside the reference range. Monitor closely.

High/Low
Above or below the reference range. Consult your physician.

UNDERSTANDING YOUR VISUALS

Range Slider

Each parameter is shown on a 3-zone color track. A floating marker displays your measured value and its position — Low (red), Normal (green), or High (red).

Health Score Gauge

Your overall score (0–100) on a semi-circular gauge. The needle and color zone show your status — Red for Attention, Amber for Monitor, Green for Healthy.

IMPORTANT NOTICE

- This guide is for informational purposes only and does not constitute medical advice.
- Results should always be interpreted by a qualified healthcare professional in the context of your complete medical history.
- Reference ranges may vary between laboratories.

KEY CLINICAL OBSERVATIONS

High Medium Low Normal

- Total Cholesterol** is HIGH (210 mg/dL). Found in *Lipid Profile* profile.
- LDL Cholesterol** is HIGH (134 mg/dL). Found in *Lipid Profile* profile.
- SGPT (ALT)** is HIGH (48 U/L). Found in *Liver Profile* profile.
- Uric Acid** is HIGH (7.2 mg/dL). Found in *Electrolyte Profile* profile.
- Blood Sugar (Fasting)** is HIGH (112 mg/dL). Found in *Diabetes Monitoring* profile.
- HbA1c (Glycosylated Haemoglobin)** is HIGH (6.1 %). Found in *Diabetes Monitoring* profile.
- eAG (Estimated Average Glucose)** is HIGH (128 mg/dL). Found in *Diabetes Monitoring* profile.
- ESR** is HIGH (18 mm/hr). Found in *Blood Counts* profile.

PRIORITY ACTIONS

6

QUICK WINS & MAINTENANCE

3

01 CRITICAL

Medication Alert

Vitamin D Supplementation Required

Vitamin D is critically low at 6.59 ng/mL (normal: 30–100). High-dose oral supplementation (60,000 IU/week for 8–12 weeks) followed by a maintenance dose is strongly recommended.

Vitamin D, 25 Hydroxy (OH)

Consult physician immediately →

Within 1 week

02 CRITICAL

Medication Alert

Insulin Resistance Detected

Fasting insulin markedly elevated at 70.7 mU/L (ref: 3–25). Combined with HOMA-IR score, this indicates significant insulin resistance and metabolic dysfunction requiring prompt medical evaluation.

Insulin, Fasting & HOMA-IR

Schedule endocrinologist consult →

Within 2 weeks

03 IMPORTANT

Follow-Up Tests

HbA1c (Glycated Haemoglobin) Test

HbA1c is essential to assess average blood glucose over 3 months. Combined with elevated fasting insulin, this will confirm or rule out pre-diabetes or Type 2 Diabetes Mellitus.

Plasma Glucose Fasting

Order lab test now →

Within 2 weeks

04 IMPORTANT

Follow-Up Tests

Repeat Liver Function Test (LFT)

SGPT (ALT) and SGOT (AST) are approaching upper limits, suggesting early hepatocellular stress. A repeat LFT after 4–6 weeks of dietary improvement and alcohol avoidance is advised.

Diet & Nutrition

Boost Vitamin D Through Food & Sunlight

Take 15–30 min of early morning sunlight daily. Include fatty fish (salmon, mackerel), egg yolks, and fortified dairy in your regular diet to accelerate Vitamin D recovery.

Ongoing

Lifestyle

Optimise Sleep & Stress Management

Chronic cortisol elevation from poor sleep and stress directly worsens insulin resistance and promotes visceral fat accumulation. Target 7–8 hours of quality sleep with a consistent schedule.

Ongoing

Monitor

Annual Comprehensive Screening

Thyroid (TSH: 1.7 µU/mL), Lipid Profile (Total Cholesterol: 172 mg/dL), and haematology are all within normal limits. Maintain current healthy habits and schedule a full-panel checkup in 12 months.

In 12 months

🔬 SGPT (ALT) · SGOT (AST)

Book LFT in 4–6 weeks →

🕒 4–6 weeks

05 IMPORTANT

🍽️ Diet & Nutrition

Eliminate Refined Carbohydrates

Immediately reduce white rice, white bread, processed snacks, and sugary beverages. Switch to a low-GI diet with whole grains, legumes, and green vegetables to restore insulin sensitivity.

🔬 Insulin Fasting · Plasma Glucose

Start low-GI diet today →

🕒 Immediate

07 IMPORTANT

🏃 Lifestyle

Begin Structured Aerobic Exercise

30 minutes of aerobic activity (brisk walking, cycling, swimming) 5 days/week reduces insulin resistance, improves HDL cholesterol, and supports liver enzyme normalisation — all validated clinically.

🔬 Insulin Fasting · Lipid Profile

Start 30-min/day aerobics →

🕒 Start this week
